**DETAILED ACTION**

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, drawn to a heterodyne interferometer, classified in class 356, subclass 484.
- II. Claims 6-10, drawn to a polarizing beam-splitter, classified in class 359, subclass 629.
- III. Claims 11-15, drawn to an aligning method for a polarizing beam-splitter, classified in class 356, subclass 364.

The inventions are distinct, each from the other because:

Inventions I., II. and III. are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions invention II. is drawn to a specific beam-splitter, invention I. is drawn to a heterodyne interferometer including a generic polarizing beam-splitter, and invention III. is drawn to an alignment method for a polarizing beam-splitter. While all the inventions deal with a polarizing beam-splitter, the inventions are different in the subject matter as claimed.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, have

acquired a separate status in the art because of their recognized divergent subject matter, and the search required for Group I. is not required for Group II. or group III., restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
